

## **TIME TAKEN**

Around 4 to 5 hours

## **ANALYSIS**

In this activity, I used Canva to break down the homepage of my chosen website, identifying its layout and labeling the sections, subsections and important smaller elements. For the website I used, the homepage of FreeRoms is my choice due to having interest in emulator games. At first, I think it looks simple so I tried to find other websites similar to it, although when I take a screenshot of their whole homepage, its quality is affected, making it harder to understand and it also got multiple contents, making the homepage quiet long to be able to scroll down below so I stick to FreeRoms. I take a screenshot of the whole page and then pasted it on a blank layout in Canva. Like how my other colleagues presented this assignment, I tried to use different colors for each section or elements that are in the same layer or relationship.

My method to breaking it down was that I identified the major section, which is the body that I identified as the whole page, enclosing it in a red border. Next will be its children, using a yellow border to highlight it, it includes the sections like header, main and footer. Header has a child which is a logo with image link to the homepage; main has three subsections namely the navbar, deals section and a center\_navbar section; and the footer also have children which include links to Contact Us page and Privacy Policy page. All of this are enclosed in green border, as it's the descendant of sections in yellow border. The last part or the descendants of green border elements are those that are enclosed in blue borders, which are the children of the navbar, deals section and center\_navbar section. This includes the heading or identifier of the section which are icons alongside an h1 label tags, unordered list of links and tables containing links, icons with links and the number of ROMS available for the said link. To summarize this, I started with the major section, moving to another section lower to the major section until I reach the lowest section.

For my time taken, it took me quite long than the 1 hour estimated time as I searched for an ideal page aside to my chosen one. It also took me some time to label the sections and elements because I'm also trying to make it correct as possible based on my understanding of the page.
